

Request to SRM

Appliances	Rated power
Microwave oven	1000-1500 W
Light	15 W
Dishwasher	1200-1800W
Washing machine	1800-2500W
Water heater	1500-3000W
Refrigerator	100-300W
Heat pump	3000-5000W
CCTV	5-15W
EVSE	6000-11000W

1. Configurable variables which will help to set the Home capacity

French residential electrical standards and usage

The digital twin home shall support configurable energy meter parameters to reflect country-specific electrical characteristics. For France, this includes voltage levels, contracted power (kVA), current limits, and device profiles based on residential usage scenarios.

Home type	Voltage	Contracted Power	Current Rating	Devices
Small Residential Villa	230 V	6–12 kVA	30–60 A	• Standard HVAC • Basic EV charging
Medium Family Home	230 V	9-12 kVA	30–45 A	• Smart energy integration • Efficient HVAC (heat pump) • Small EV charger (slow)
Large Villa / High-End Home	230 V (single-phase) / 400 V (3-phase optional)	12-24 kVA	45-90 A	• 11–22 kW EV charging • Pool pumps • Large HVAC systems • Smart home automation • Solar PV + battery integration

2. MCB (Miniature Circuit Breaker) concept showing some warning

Devices ON → Load increases → Compare with Set Load → Trip if exceeded(Warning)
